

Mexico - Gulf of California

[et_pb_section bb_built="1?][et_pb_row][et_pb_column type="4_4?][et_pb_text _builder_version="3.0.105? background_layout="light"]

The Gulf of California's fisheries, which include shrimp, squid, tuna and sardines, account for 70% of Mexico's fishing and contribute USD \$ 900 million annually to its economy. The spectacular natural beauty of the region attracts more than 1.5 million tourists a year. Although critical to the national economy, fisheries and coastal development also threaten the very ecosystems that produce fish, attract tourism and protect the coast from storms.

Since 1996, The Nature Conservancy (TNC) has protected and restored the natural resources of this region. In 2012, we launched the Marine Initiative for the Gulf of California, a ten-year effort that seeks to mobilize political will and funding in favor of the management of marine areas and the protection of 10 million hectares in order to double the areas under conservation and fishing management.
